     Human and mouse cDNAs for bcl-2-related gene bcl-
AB
     w and the corresponding proteins are disclosed. The present
     invention is broadly directed to therapeutic mols. capable of inter alia
     modulating apoptosis in mammalian cells. The therapeutic mols. of the
     present invention encompass genetic sequences and chemical entities capable
     of regulating expression of bcl-w family and which
     promotes cell survival. The therapeutic mols. of the present invention
     may have further utility in delaying cell cycle entry. In addition, the
     present invention extends to chemical entities capable of modulating activity
     and function of the translation product of the bcl-w
     gene. The present invention also extends to the translation product of
     the bcl-w gene and its use in, for example, therapy,
     diagnosis, antibody generation and, as a screening tool for therapeutic
     mols. capable of modulating physiol. cell death or survival and/or
     modulating cell cycle entry. The bcl-w gene was
     mapped to human chromosome 14q11.2. Alternative splicing of the
     bcl-w gene transcript produced an mRNA for a bcl
     -w-rox chimera. The bcl-w gene was
     expressed in many cell types. Amongst the tissues surveyed, the level was
     highest in brain, colon and salivary gland. A survey of 50 mouse
     hemopoietic cell lines revealed that bcl-w expression
     was common in cells of several myeloid lineages, including macrophage,
     megakaryocyte, erythroid and mast cell lines, but rare in either B or \mathtt{T}
     lymphoid lines.

     Koentgen, Frank
     Transgenic mice carrying a disruption of the bcl-w
AB
     gene or of genes interacting with it and that fail to undergo productive
     spermatogenesis and are male infertile are described for use in studies of
     male fertility and of the biol. role of bcl-w. Such
     animals can be used to screen for therapeutic mols. including genetic
     sequences capable of inducing, enhancing or otherwise facilitating
     spermatogenesis in said animals as well as a model for mols. and genetic
     sequences which can induce infertility. The bcl-w
     gene was disrupted by insertional inactivation. Inactivation of
     bcl-w did not affect survival of fetal and neonatal mice
     and the mutation showed a near-normal Mendelian segregation.
     Hematopoiesis was unaffected by the mutation but the testes showed
     heterogeneous pathol. changes in the seminiferous tubules. Sertoli cells
     remained normal although low in number and Leydig cell were increased by 50%.
     Germ cell nos. declined steadily with as the stage of development
     advanced. The mutation did not affect androgen levels or androgen
     responses in other organs.

     The prototypic mammalian regulator of cell death is bcl-2, the
AB
     oncogene implicated in the development of human follicular lymphoma.
     Several homologues of bcl-2 are now known. Using a PCR-based
     strategy we cloned a novel member of this gene family, denoted bcl
     -\mathbf{w}. The gene, which is highly conserved between mouse and
     human, resides near the T-cell antigen receptor alpha gene within the
     central portion of mouse chromosome 14 and on human chromosome 14 at band
     q11. Enforced expression of bcl-w rendered lymphoid
     and myeloid cells refractory to several (but not all) cytotoxic
     conditions. Thus, like Bcl-2 and Bcl-x, the
     Bcl-w protein promotes cell survival, in contrast to
```

other close homologues, Bax and Bak, which facilitate cell death. Comparison of the expected amino acid sequence of Bcl-w with that of these relatives helps to delineate residues likely to convey survival or anti-survival function. While expression of bcl-w was uncommon in B or T lymphoid cell lines, the mRNA was observed in almost all murine myeloid cell lines analysed and in a wide range of tissues. These findings suggest that bcl-w participates in the control of apoptosis in multiple cell types. Its functional similarity to bcl-2 also makes it an attractive candidate proto-oncogene.

- Proteins of the Bcl-2 family are important regulators of ΑB apoptosis in many tissues of the embryo and adult. The recently isolated bcl-w gene encodes a pro-survival member of the Bcl-2 family, which is widely expressed. To explore its physiological role, we have inactivated the bcl-w gene in the mouse by homologous recombination. Mice that lack Bcl- ${f w}$ were viable, healthy, and normal in appearance. Most tissues exhibited typical histology, and hematopoiesis was unaffected, presumably due to redundant function with other pro-survival family members. Although female reproductive function was normal, the males were infertile. The testes developed normally, and the initial, prepubertal wave of spermatogenesis was largely unaffected. The seminiferous tubules of adult males, however, were disorganized, contained numerous apoptotic cells, and produced no mature sperm. Both Sertoli cells and germ cells of all types were reduced in number, the most mature germ cells being the most severely depleted. The bcl-w-/- mouse provides a unique model of failed spermatogenesis in the adult that may be relevant to some cases of human male sterility.

- Certain Bcl-2 family members promote cell survival, whereas AB others promote apoptosis. To explore further how heterodimerization of opposing members affects survival activity, we have compared the abilities of the anti-apoptotic Bcl-w and Al to bind to the pro-apoptotic Bax, Bak, Bad and Bik and to protect cells from their cytotoxic action. Bcl-w co-immunoprecipitated from cell lysates with Bax, Bak, Bad and Bik, but Al bound only Bak and Bik. Mutation of Al at a highly conserved glycine within the BH1 domain prevented binding, but the comparable Bcl-w mutant still bound Bak, Bad and Bik, indicating that the glycine is not essential for all heterodimerization. Bcl-w and Al protected against apoptosis induced by over-expression of Bax or Bad but not that induced by Bak or Bik. With several gene pairs, binding and protection were discordant. The results may reflect critical threshold affinities but also suggest that certain pro-apoptotic proteins may also contribute to apoptosis by a mechanism independent of binding pro-survival proteins.

- Anti-apoptotic members of the Bcl-2 family, such as Bcl AB $-\mathbf{w}$, maintain cell viability by preventing the activation of the cell death effectors, the caspases. Gene targeting experiments in mice have demonstrated that Bcl-w is required for spermatogenesis and for survival of damaged epithelial cells in the gut. Bcl-w is, however, dispensable for physiological cell death in other tissues. Here we report on the analysis of Bclw protein expression using a panel of novel monoclonal antibodies. Bcl-w is found in a diverse range of tissues including colon, brain and testes. A survey of transformed cell lines and purified hematopoietic cells demonstrated that Bcl-w is expressed in cells of myeloid, lymphoid and epithelial origin. Subcellular fractionation and confocal laser scanning microscopy demonstrated that ${\bf Bcl\text{-}w}$ protein is associated with intracellular membranes. The implications of these results are discussed in the context of the phenotype of Bcl-w-null mice and recent data that suggest that Bcl-w may play a role in colon carcinogenesis.

This in turn yielded 340 ug of total RNA and 7 ug of mRNA. A directionally cloned cDNA library in the pwwSpORT6 vector was constructed at Life Technologies (Rockville, MD; now part of Invitrogen Corp), essentially following the protocols of the SuperScript Plasmid System (Invitrogen Corp. chttp://www.invitrogen.com/>). The library code designation was cs. For this library, cDNA inserts were cloned into the NotI/MluI sites of the vector. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred.
